An apparatus for determining a translation word includes a word vector generator configured to generate a word vector corresponding to an input word of a first language with reference to a first word vector space that is related to the first language, a word vector determiner configured to determine a word vector of a second language, wherein the determined word vector of the second language corresponds to the generated word vector, using a matching model, and a translation word selector configured to select a translation word of the second language, wherein the selected translation word corresponds to the input word of the first language, based on the determined word vector of the second language.
